How I work

Most hiring problems are not sourcing problems. They are decision problems — unclear roles, inconsistent assessment, and no record of why anyone was hired.

I build hiring and people systems the way a product team would: a defined pipeline, written scorecards, instrumentation at each stage, and a record that survives the people who created it. That applies whether the mandate is one founding engineer or a full review cycle across 200+ employees.

Seven years span agency and in-house. Four of those were global RPO at Techaxis, running executive search for Fortune 100/500 enterprises in the US. The rest has been in-house at hoichoi, LoglineAI and Sooper, owning everything from the first conversation to the exit checklist.

Agency discipline

Finding people who are not looking, and moving fast when they are.

In-house accountability

Owning what happens after the offer is signed.

Systems built to last

Written down, instrumented, and handed over — not held in one head.

01

Executive & Founding Team Hiring

End-to-end mandates for the roles that set a company's direction — founding engineers, CTOs, CFOs, SVPs and senior directors.

Starts with role architecture, not a job post: what the role actually has to deliver in its first year, what it is accountable for, and what good looks like at offer stage. From there, AI-assisted sourcing, structured assessment, and a scorecard every interviewer files against.

Comp is benchmarked against live market data before the first conversation, so offers land at the right number rather than being negotiated upward. Onboarding is treated as part of the mandate — a hire is not delivered until they are productive.

SCOPE

Role architecture · JD design · sourcing · assessment · offer · onboarding

TYPICAL ROLES

Founding engineers · CTO · CFO · SVP · Senior Director

DELIVERED FOR

LoglineAI · Sooper · hoichoi

OUTCOME

Zero attrition in the LoglineAI founding engineering team

02

AI-Native Hiring Infrastructure

A custom suite of recruiting tools built on Claude Sonnet and Gemini, wired into the ATS you already use.

Covers JD generation, resume screening against written criteria, role-specific interview questions, personalised outreach, and structured scorecards. Each piece replaces a task that was previously manual, inconsistent, or outsourced to an agency at a percentage of salary.

The point is not automation for its own sake. It is that screening becomes consistent and auditable: every candidate assessed against the same criteria, with the reasoning recorded rather than lost in an inbox.

BUILT WITH

Claude Sonnet · Gemini Flash · Python · Slack webhooks

COVERS

JD generation · screening · interview design · outreach · scorecards

INTEGRATES

Zoho Recruit · Keka · existing ATS

OUTCOME

60% reduction in recruitment cost; agency dependency removed

03

Performance & Governance Systems

A performance model that weights OKRs, Efficiency, AI Usage and the Keeper Test equally — deployed as working review software, not a template.

The 25/25/25/25 split forces a complete picture: what someone delivered, how efficiently, how well they have adopted the tools available, and whether you would fight to keep them. Equal weighting stops any single dimension from carrying a review on its own.

Shipped as software rather than a document, so the cycle actually completes. Managers file in a consistent format, calibration happens against comparable records, and the output is a record you can reference a year later.

MODEL

25% OKRs · 25% Efficiency · 25% AI Usage · 25% Keeper Test

INCLUDES

Review platform · calibration process · manager workflows

SCALE

200+ employees across engineering, product and business units

STATUS

Full annual cycle run end to end

People Operations & Lifecycle Design

HR operations, compliance, payroll and the full employee lifecycle — designed so the handoffs between them do not leak.

Onboarding is 28 tracked tasks with stage gates, a named buddy, manager visibility and a 90-day plan agreed before Day 1. Progress per joiner is visible on a dashboard, so a stalled induction is caught in week one rather than at the first review.

Offboarding gets the same treatment: a real checklist covering access, assets, handover and an exit conversation that produces something usable, instead of the scramble that usually follows a resignation.

COVERS

Onboarding · compliance · payroll · policy & SOPs · offboarding

ONBOARDING

28 tracked tasks · stage gates · 90-day plan

TOOLING

Keka · custom onboarding platform · live dashboard

COVERAGE

Day 1 through structured exit

05

People Analytics & Talent Intelligence

Pipeline and workforce data presented so leadership can act on it, rather than a monthly deck nobody opens.

Live dashboards cover time-to-fill, offer acceptance, stage-by-stage drop-off and attrition trends, benchmarked against the market you are hiring in. When a stage starts leaking, it shows up as a number before it shows up as a missed quarter.

Exit interviews are translated into retention risk reporting — patterns across departures rather than individual anecdotes, with the specific teams and managers where risk is concentrating.

TRACKS

Time-to-fill · acceptance · funnel drop-off · attrition

INCLUDES

Workforce planning models · market benchmarks · retention risk

REPORTED TO

Founders · COOs · SVF leadership

CADENCE

Live dashboard with scheduled leadership review

06

Founder & C-Suite Partnership

Working directly with founding leadership on the people decisions that do not delegate cleanly.

Board updates and executive review decks, org design inputs ahead of a funding round or restructure, and corporate messaging around hires, departures and internal change. The work is as much about what gets communicated as what gets decided.

Operationally, pre-screening and AI scorecards mean the C-suite only sees candidates worth their time. At hoichoi this extended into the AI Transformation working group — 100 use cases scoped across 20 departments.

COVERS

Board decks · org design · change management · corporate messaging

PROGRAMME

100 AI use cases scoped across 20 departments

ARCHITECTURE

hoichoi Cortex — five-layer design, four layers live in HR

WORKS WITH

Founders · COO · CTO · SVF leadership

How the pipeline runs

Five stages, each instrumented. Filter early so senior time is spent late.

01 Sourcing & talent mapping

Boolean search across LinkedIn Recruiter, Juicebox, Wellfound and Eightfold.ai, surfacing passive candidates as well as applicants.

FULL MARKET

02 Async assessment, AI-scored

Video, aptitude and technical assessments completed asynchronously. Scoring is consistent and removes scheduling overhead before anyone's time is committed.

~60% FILTERED

03 Structured interview & debrief

Competency rubrics per role family, trained interviewers, and recorded debriefs that become scorecards rather than opinions.

SCORECARD FILED

04 Offer & negotiation

Comp benchmarked in advance. Offers generated through a structured workflow with full CTC breakdown, tracked in the ATS.

85%+ ACCEPTED

Areas of practice

Where the work sits, across the full people function.

TALENT & PEOPLE

- Full-cycle talent acquisition
- Executive & niche hiring
- Founding team structure
- Structured interviewing & scorecards
- Workforce planning & org modelling
- Campus hiring & intern-to-hire
- Onboarding & offboarding
- Learning & development

AI & AUTOMATION

- Claude & Gemini workflows
- Prompt engineering & agent skills

Selected work

Platforms designed and shipped for the people team, running in production.

AI-Native Onboarding Platform

2025 — 2026

Replaces a manual 12-step induction with a single tracked workflow. Document collection and verification are automated and synced to the HR system.

React · Claude Code · Cloudflare Pages

Org Performance & Review Engine

2025

Built for 200+ employees. Carries the annual review cycle when everyone files at once, and turns written feedback into a comparable record.

React · Cloudflare Pages · Structured JSON

AI Talent Studio

2025 — 2026

Five recruiting tools on Claude Sonnet and Gemini — JD generation, screening, interview design, outreach and scorecards in one workflow.

Claude Sonnet · Gemini · Python · Slack

hoichoi Cortex

2026

Let's talk.

Open to mandates in executive search, AI-native hiring infrastructure, and People Operations design.
